AM

## SUMMARY

With 8 years of experience in applying machine learning techniques in astrophysics, I am dedicated to enhancing scientific discoveries. Proficient in Python and data manipulation, I have improved data processing efficiency by 30% in previous roles. Excited to contribute to harnessing AI for scientific advancements.

## EXPERIENCE

### Senior Data Scientist

**Lockheed Martin**

06/2019 - Present  Denver, Colorado

- Developed an AI model that increased data processing speed by 30% within 6 months, significantly improving operational efficiency.
- Led a team to design a machine learning framework for astronomical data, resulting in a 25% more accurate data classification system.
- Implemented feedback mechanisms for continuous improvement of AI tools, enhancing model precision in real-world applications.
- Collaborated with cross-functional teams to integrate new ML tools, facilitating a 20% improvement in data workflow synchronization.
- Mentored junior data scientists on advanced AI applications, improving team skill levels and boosting project outcomes.
- Published research on machine learning applications in peer-reviewed journals, contributing to industry knowledge and visibility.

### Data Science Consultant

**Ball Aerospace**

05/2015 - 05/2019  Boulder, Colorado

- Designed data ingestion procedures for large-scale projects, improving data availability by 40%.
- Customized AI models for niche scientific domains, increasing accuracy by 15% in data classification tasks.
- Provided technical expertise in machine learning to various teams, aiding in the successful deployment of new projects.
- Co-authored data policy strategies that optimized data utilization and archives, streamlining data retrieval processes by 25%.
- Managed data visualization projects that reduced data interpretation time by 20%, increasing stakeholder engagement.

### Research Associate

**NASA Jet Propulsion Laboratory**

01/2012 - 04/2015  Pasadena, California

- Evaluated AI models for remote sensing data, leading to a 10% improvement in data accuracy.
- Automated data cleansing processes that reduced manual errors by 35%, improving data quality for research.
- Conducted workshops on AI applications in astrophysics, increasing staff proficiency and interest in technology.
- Collaborated on an interdisciplinary project that integrated AI with traditional methods, resulting in innovative research outcomes.

## EDUCATION

### Master of Science in Astrophysics

**University of Colorado Boulder**

01/2010 - 01/2012  Boulder, Colorado

## PROJECTS

### AI-Based Star Classification

Developed an algorithm to classify stars based on spectral data. See details at github.com/amelia/star-classification.

### Exoplanet Detection Models

Contributed to an open-source project for creating models that improve exoplanet detection accuracy. Details available at github.com/amelia/exoplanet-detection.

## KEY ACHIEVEMENTS

**Innovative Data Workflow Framework**

Implemented a data workflow framework that increased team productivity by 25% and reduced processing time in scientific projects.

**AI Model Efficiency**

Enhanced AI model efficiency, resulting in a 30% reduction in error rates and significant advancements in project outcomes.

**Improved Data Classification**

Led initiatives that improved data classification accuracy by 15%, enhancing the quality of archived astrophysical data.

**Successful Project Presentations**

Delivered impactful presentations on AI integration that increased stakeholder confidence and secured project funding by 20%.

## SKILLS

Machine Learning, Python, Data Analysis, Astrophysics, Data Archiving, AI Integration

## TRAINING / COURSES

**Advanced Machine Learning for Big Data**

Offered by Stanford University, this course focuses on machine learning applications in handling large data sets.

**Data Science in Astronomy**

Provided by Harvard University, this certification covered data science techniques for astronomical research.
